Advanced Concrete Technologies (ACT) to show new FLEX Multi-Purpose Color Metering System, designed for maximum flexibility and cost savings, at 2008 MCPX in Denver.

Greenland, NH - Advanced Concrete Technologies, Inc., the American division of Wiggert + Co. and Würschum, will show its new FLEX Multi-Purpose Color Metering System at the 2008 MCPX in Denver, Booth #355. The FLEX Multi-Purpose Color Metering System, from Würschum GmbH, is uniquely designed to accurately meter powder, compact powder, or granular pigments with one single machine, giving producers of colored concrete products the flexibility to source pigment from any supplier they choose.

The FLEX 70 system features a small footprint, and provides accurate, fast pigment metering with pneumatic conveying of a dry pigment batch to as many as three separate mixers from a remote ground level location. The pigment metering station can easily be loaded using Super Sacks with a forklift or 50-pound paper bags. An unlimited number of color shades are possible using four primary colors. An extra color dispensing position is available for special colors. In addition, an extra Super Sack rack may be added to double the storage capacity of certain, high use pigment colors. The FLEX 70 color metering system comes completely pre-tested and pre-wired from the factory for fast and trouble-free set up. A mixer dust collection system is available and includes reverse air shock for automatic filter cleaning.

In addition to the FLEX 70, Advanced Concrete Technologies will also have on hand a complete, turnkey MobilMat Mo45, top of the line, fully automatic mixing and batching plant. The plant, complete and mounted on a full platform, is ideal for dry and wet cast, specialty and architectural concrete production. The company will also be showing their latest Combination Admixture/Color Weigher system – a weight-based admixture metering scale that is more reliable and precise than volumetric systems.

Advanced Concrete Technologies is a single source supplier of turnkey concrete mixing and batching plants that draws on over 40 years of experience and more than 4,000 installations worldwide. The company's turnkey plants are up and running quicker, producing consistent, superior quality concrete. In addition to its MobilMat turnkey batching & mixing plants, ACT provides the industry's most advanced Countercurrent & Twin Shaft Mixers, Color Metering, Microwave Moisture Metering, Flying Bucket Delivery, Automatic Mixer Cleaning and Computer Control Systems. Advanced Concrete Technologies, Inc. is headquartered at 300 Portsmouth Avenue, Greenland, New Hampshire, USA, 03840.

To learn more about the new FLEX color metering system and all of Advanced Concrete Technologies' latest concrete mixing and batching innovations, see the company at the MCPX, Booth #355, log on to website at www.concretebiz.com, or call (603) 431-5661.
