

# >> Reduce your clean up time. Increase your productivity.

**Introducing Zetolan® PLUS – The advanced solution for cleaning and protecting all your concrete production equipment.**

Daily cleaning of your mixers and plant equipment is a time consuming and costly process. Removing hardened concrete build-up with hammer and chisel increases wear and tear on your equipment and disrupts the production process. To eliminate this headache, Advanced Concrete Technologies offers an efficient alternative: Zetolan PLUS.

## Zetolan PLUS

- More than just a release agent, Zetolan PLUS actually dissolves hardened concrete build-up
- Dramatically cuts labor cost with shorter daily cleaning time
- Protects mixers and plant equipment from the adhesion of concrete
- Helps maintain concrete equipment in top condition
- Improves equipment productivity and reliability
- Improves plant working conditions and safety
- Avoids wear and tear associated with traditional cleaning agents and methods

## Easy and safe to use

- Will not affect or interfere with concrete mix properties
- Won't degrade rubber or plastic
- Effective even when applied to wet surfaces
- Comes with innovative dispensing system for safe and efficient application
- Non-Corrosive, non-toxic, no noxious fumes

## Protect your equipment and the planet

- Zetolan PLUS is environmentally friendly, non-hazardous, VOC-free, and highly biodegradable

Leyco-MV7 electric airless spray pump

## Zetolan® PLUS: The ultimate concrete cleaning and protection agent.

Profit from labor savings and better long-term equipment care with Zetolan PLUS. The non-corrosive formula gently degrades and dissolves concrete build up over time with daily applications.

Zetolan PLUS has superior release and anti-adhesion properties compared to traditional release agents. It effectively keeps areas clean which are exposed to concrete. A light coating applied to any wet or dry surface exposed to concrete will prevent adhesion for up to 24 hours. Zetolan PLUS is ideally suited for all types of concrete mixers, pumps, chutes, buckets, etc.

In addition, when used regularly even existing hardened concrete will be removed layer by layer over time. Once the surface is clean Zetolan PLUS continues to actively prevent the formation of future build up. This keeps your equipment investment looking clean and performing at it's best.
